

CLOUD VS. SERVER: WHAT'S RIGHT FOR YOU?

Traditionally, healthcare organizations have used server based software and hardware. But lately, there has been a lot of buzz about cloud computing and how that technology can benefit organizations. So we broke down the differences between server based hosting and cloud hosting that way you can decide the right fit for your organization.

SERVER BASED

VS.

CLOUD BASED

Software and data reside on a server that is located at your facility

Server Arrangement

Software and data are held at a central server off-site at our data center

Software is installed and managed on each computer

User Interface

Gain access to your AIMS software via a web browser, no software installation

Upfront hardware costs and future hardware investments

Cost

Predictable monthly hosting fees; pay-as-you-go

Accessed on site through computers that have AIMS installed

Access

Anywhere using a device with Internet access

Upgrades and Enhancements must be installed by your IT department

Upgrades

Upgrades and Enhancements are installed by our IT Specialists, so you are always using the most current version of AIMS

Maintained by your organization through your IT department

Maintenance

Maintained by Phoenix with daily data backups

Your organization needs to maintain data security through their own resources

Security

Designed to meet HIPAA security requirements, your data will reside on our secure servers ensuring premium data security
